

SUB AT

1. A method for gathering information relevant to the creation of a family tree, organizing the information, and displaying it in the form of a family tree, comprising the steps of:
 - searching multiple databases through a network and scanning the database for relevant information,
 - reviewing said information according to a set of algorithms for relationships to other individuals entered into the local database and assessing the probability that the newly identified individual is related to the original individual,
 - providing said information, along with the probability assessment to the user for acceptance or rejection; and
 - and updating the database upon acceptance of the user.
2. A method according to claim 1 wherein said network is the internet.
3. A method according to claim 1 wherein said algorithms are contained in software that is loaded onto a personal computer.
4. A method according to claim 1 wherein said algorithms are contained in software that is loaded onto Kiosk.
5. A method according to claim 1 wherein said algorithms are contained in software that is contained on a third party server and is accessed by the user via a connection to a network.
6. A method according to claim 4 wherein said network is the Internet.
7. A method according to claim 1 wherein the data is rendered into a family tree format and printed on a printer connected to a personal computer.

8. A method according to claim 7 wherein the printing is done on a Kiosk.
9. A method according to claim 7 wherein the printing is done by a third party service provider.
10. A method according to claim 1 wherein the data is stored on a Compact Disk.
11. A method according to claim 1 wherein the data is input at a third party location, such as a funeral home.
12. A method according to claim 1 wherein the data is partitioned into sections.
13. A method according to claim 12 wherein different levels of accessibility are provided for each section.
14. A method according to claim 1 wherein the individuals are related not through family relationships but due to other experiences.
15. A method according to claim 14 wherein said experience is a secondary school or university class.
16. A method according to claim 14 wherein said experience is related to military service.
17. A method according to claim 1 wherein said data may comprise any one of the following: text, image, or sound.

19. A method according to claim 18 wherein the user has the option to approve or not approve said additions or edits.

searching multiple databases through a network and scanning the database for relevant information;

providing said information, along with the probability assessment to the user for acceptance or rejection; and

21. A method according to claim 20 wherein the data comprising the family tree is contained in a web page hosted on a server connected to a network.

22. A method according to claim 21 wherein said network is the Internet.

23. A method according to claim 21 wherein said web page includes a template for setting forth the manner and structure of the web page/site.

24. A method according to claim 21 wherein said web page is hosted by a business establishment having a plurality of such web pages.

26. A method according to claim 20 wherein said electronic data base is accessed by personal computer at a location remote from said electronic data base.

28. A method according to claim 27 wherein said specified data is obtained at or near the time of death of said first or second individual.

30. A method according to claim 27 further comprising the step of printing a family tree based on said established family connection.

32. A software product for automatically compiling a family tree such that when loaded onto a computer it would cause the computer to do the following steps of:

33. A computer software product for gathering information relevant to the creation of a family tree such that when loaded onto a computer will cause the computer to go through the steps of:

- searching multiple databases through a network and scanning the database for relevant information;
- reviewing said information according to a set of algorithms for relationships to other individuals entered into the local database and assessing the probability that the newly identified individual is related to the original individual;
- providing said information, along with the probability assessment to the user for acceptance or rejection; and
- updating the database upon acceptance of the user.
